A11 Smart Dimmer Switch Third party Matter App Access Operation Instructions
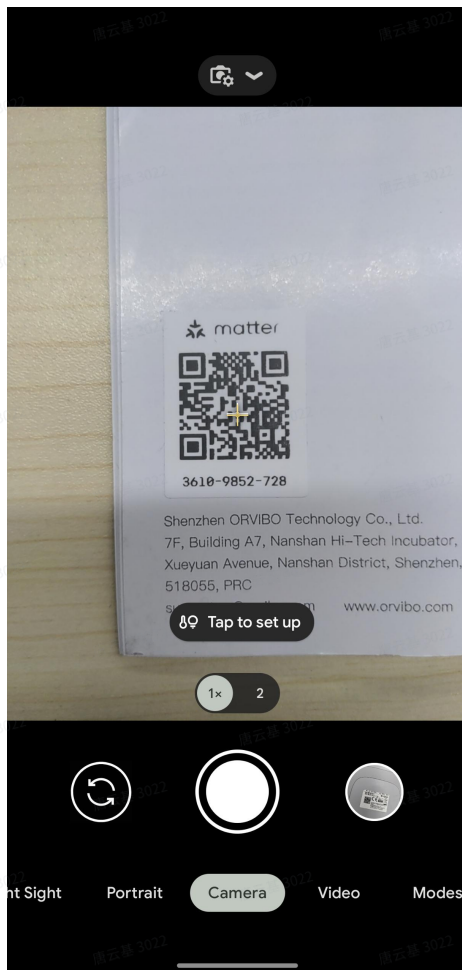

Note:

- As software evolves, the latest user interfaces may differ slightly from what is described in this instruction.

- The account must first add a HomePod, Google speaker or Alexa speaker that supports the Matter protocol. Check the FAQ for a specific list.

- Orvibo Dimmer Switch and the controller (normally it's the smart speakers of Alexa/Google/Apple) should be in the same LAN (lacol area network).

- The WiFi router should support or enable IPv6.

- If the indicator light flashes white slowly, you can add devices automatically. （If the indicator light does not flash white, press the button 2 times quickly, then press the button again until the indicator flashes slowly.）
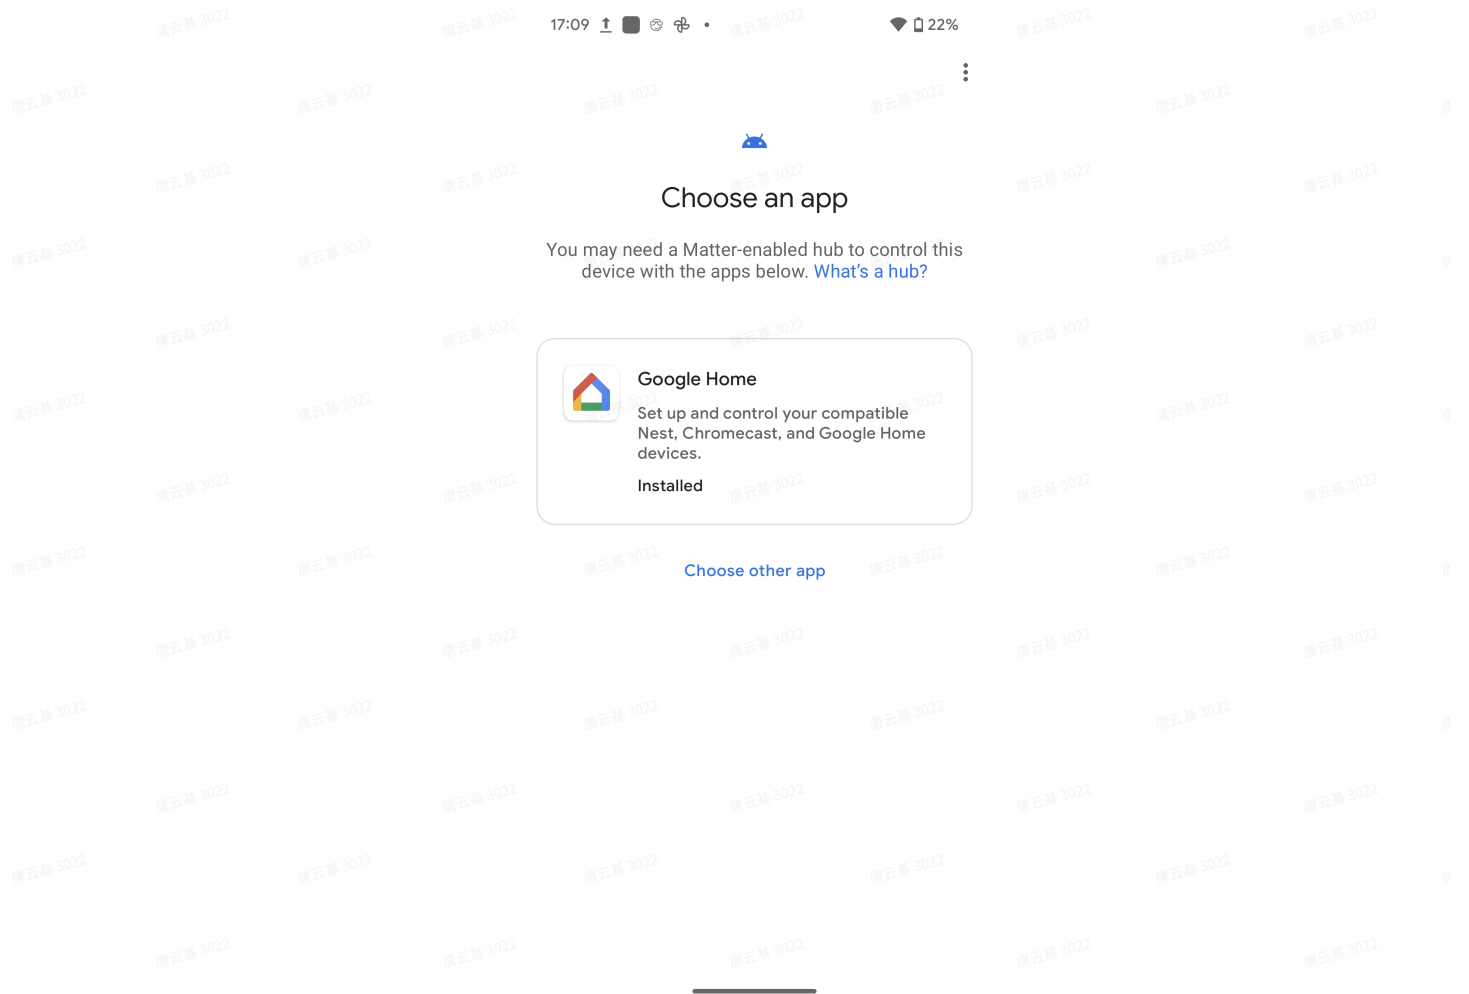

Using Google Home App

- Open the camera App of Android;

- Scan the Matter QR Code on the product or user manual and tap "Tap to set up".

- Tap on Google Home in the App list.

Choose an app

You may need a Matter-enabled hub to control this device with the apps below. What's a hub?

Google Home

Set up and control your compatible Nest, Chromecast, and Google Home devices.

Installed

Choose other app

- Tap "I Agree" to add the product, then wait for the device to connect. Once added, tap "Done".

⋮

G

Connect this device to your Google Account

This lets you control your device with Google Assistant or the Google Home app.

To do this, Google securely shares your local network credentials (e.g. Wi-Fi) so the device can get online. The device shares information with Google, like its current state (on or off, for example).

Google may make firmware updates available when firmware updates are provided by your device manufacturer. For debugging and product improvement, Google may share aggregate device usage data and de-identified diagnostic data with the device manufacturer.

Information shared with Google will be processed in accordance with Google's Privacy Policy. You can remove this connection anytime in Settings.
